This is the form PDF: the bold times (trot) and weights (gallop) should be to be aligned on the right of each cell.

Each cell is one race. There are 3 back races (cells) for each horse, latest one first. The form “scrolls” down each column, 4 columns to an A4 pages.

1. CHERRI FORSAFE 66.0

number, horse, weight - taken from TODAY’S racecard (all the other data comes from PAST racecard/results.htm pages).

Date, track, distance, T (Turf), going (Good 3.1 – will be F/S/Sl (fast, standard, slow) for all-weather, type of race (Claiming Handicap)

Division 1 and reference +25 (if a handicap), class (B)

Horse in today’s race is underlined and in **bold** if the horse in question – look at the difference in Cherrri Foresafe in cells 1 and 2. The first 5 finishers are always included, plus any other horses in today’s race, regardless of finishing position (eg. Cell 9, Nan’s Joy).

- 1. (1st) Cherriforsafe (horse) ● = blinkers worn (Aid)
- 2 = draw (flat only)
- (11k) = claiming price (only applies to claiming races)
- 3g = age three, gelding
- C Soumillon = jockey (shortened from the Chris Soumillon on the racecard)
- 1.85 = starting price (SP)
- 66.0 = weight (will be a time for trot)

Then the comments in running “made all, pulled clear final furlong” (comments are only shown for runners in today's race)

Bottom part: distances beaten, time of race (+/- in brackets is derived from my standard times (already explained), number of runners.

All this “form” (data) is taken from the database (stored from previous racecard/results pages).

I made cell 1 as an example of what today’s result will look like, but in reality this will be an earlier event.

Jumps example: same as for flat, except there is no draw. The discipline Hdle (Hurdle) is added (SC for steeplechase, X for cross-country)

Trot example: 5. NANS JOY 2025

number, horse, distance to be run (distance taken from today’s card + recul)

Date, track (Vincennes) distance, (2000m), S (Sand), Chariot Cl (claiming), Class (Gr.1). The ☐ = all 4 shoes removed. The +25 is the difference between the race distance and actual distance run (recul). Instead of weights after the jockey or driver, the finishing time. There is no “distance beaten” in trotting races, just a finishing time. Finally, number of runners.
